Power

- ✓ Battery is not replaceable.
- ✓ Thermometer powered by light.
- ✓ The built-in solar panel powers this thermometer by using energy from the sun or ambient light.

Can I view temperature in Celsius?

1. Press the ON button to turn your thermometer on. By default the temperature display will be in Celsius, if you wish to change it to Fahrenheit press the ON button once more.
2. To reset your unit, press the Reset button.
3. To turn off your unit, press and hold the ON button for 5 seconds or until unit turns off.

Mount on Window

- ✓ Thoroughly clean the window where the thermometer holder will attach.
- ✓ Moisten suction cup before attaching to the window or glass door for a secure seal.
- ✓ Do not attach the suction cup to painted or other textured surfaces. The unit may fall and damage may occur.
- ✓ To use outdoors, place the suction cup on the front of the unit so that the display is visible through the window.
- ✓ To use indoors, place the suction cup on the back of the unit so the display is visible when the unit is attached to the window

Accuracy

- ✓ Since no window is a perfect insulator, it is possible that this temperature difference is caused by heat leakage through the windowpane.
- ✓ To double-check the accuracy of the thermometer, bring it indoors for two hours, and set it next to the thermostat.
- ✓ If it is within 2-3 degrees, the thermometer is working correctly. If the temperature gap is greater than 3 degrees after 2 hours, the window thermometer may be defective.
 - Is the thermometer mounted in a shady location?
 - Is the temperature incorrect at night as well as during the day?

Thermometer is Dim.

- ✓ Most thermometers have a gray background. Place the thermometer at eye level. Is it still dim?
- ✓ Thermometers that sit in the sunlight can develop a cloudy film over time.
- ✓ Charge with solar panel in the sun for 24 hours.

Thermometer is Blank: No letters, numbers or dashed lines.

- ✓ Charge with solar panel in the sun for 24 hours.
- ✓ Be sure thermometer is turned ON.
